(a) All system owners shall monitor for microbiological contaminants in accordance with Env-Dw 707, Env-Dw 708, and Env-Dw 709.

(b) The microbiological MCL shall be based on the presence or absence of total coliforms in a sample, rather than coliform density, in accordance with the following:

(1) For a system that collects 40 or more samples per month, if no more than 5.0 percent of the samples collected during a month are positive for total coliforms, the system shall be deemed in compliance with the MCL for total coliforms; or

(2) For a system that collects less than 40 samples per month, if no more than one sample collected during a month is positive for total coliforms, the system shall be deemed in compliance with the MCL for total coliforms.

(c) For purposes of the public notification requirements in Env-Ws 355.01 or successor rule in Env-Dw 801.01, the following shall be deemed to be acute violations of the MCL for total coliforms that pose an acute risk to health:

(1) Any repeat sample that is positive for fecal coliforms or E. coli; and

(2) Any repeat sample that is positive for total coliforms following a routine sample that is positive for fecal coliforms or E. coli.

(d) A system owner shall determine compliance with the MCL for total coliforms for each month or time period in which it is required to monitor for total coliforms in accordance with Env-Dw 707, Env-Dw 708, and Env-Dw 709.

(e) Determinations of compliance with the microbiological MCLs and MCLGs shall be as stated in Env-Dw 707, Env-Dw 708, and Env-Dw 709.
